

From the War-Room to the Bench: Navigating AI in the New Legal Frontier

Learning Objectives

- Define and Recognize AI in Legal Practice - Participants will be able to define key artificial intelligence concepts (including generative AI), identify current and emerging uses of AI in law practice, and distinguish factual scenarios in which AI tools impact advice, communication, document creation, and court submissions.
- Identify and Address Ethical Duties and Risks - Participants will apply Rules of Professional Conduct to common uses of generative AI in law firm settings and otherwise by lawyers and legal professionals, and articulate the primary ethical risks (such as confidentiality, supervision, competence, candor, and unauthorized practice of law).
- Develop Risk Mitigation Strategies and Best Practices - Participants will learn frameworks and strategies for ethically utilizing AI—including supervision, client communication, verifying AI outputs, vendor selection, and written firm policies—to avoid common pitfalls and maintain compliance with professional obligations.
- Reflect on AI's Impact and Plan for Ongoing Compliance - Participants will reflect on how AI adoption affects client service, law firm business models, access to justice, and the practice of law, and will develop individual or firm-level action steps for continuous ethical compliance as technology evolves.
